WHO WILL BUY YOUR LOGS?

The objective of this publication is to present you with a comprehensive listing of sawmills, log buyers and others, who are actively seeking to buy logs and other forest products off your property. Forest Landowners of California (FLC) initially produced this document in 1998 and included it as part of the Spring newsletter that year. In 2014 FLC believed it was time to update and once again make this handy reference guide available to its members.

Each mill was personally contacted prior to the 2014 printing. This 2016 version has been updated with the most current information available as of the printing date. When published in 1998 there were at least 36 active log mills operating in California—at present there are 26. Loss in the milling infrastructure has been significant during the last two decades, but not unexpected. With the transition from a large log (depletion of old growth) supply to a smaller (generally 32" and less) second growth timber supply, all who worked in the timber industry knew there was going to be a reduction in the number of mills and a consolidation of milling capacity as companies made this transition. What was unexpected was the almost total loss in Forest Service timber sales on which mills without a timberland base (e.g., fee lands) were significantly dependent.

Beginning in the early 1990s, coinciding with the listing of the Northern Spotted Owl, the timber supply from U.S. federal lands was almost completely shut off, causing log shortages and ultimately resulting in a number of mill closures. By the mid-1990s there were only 40 operating sawmills in California, with none in Southern California. Other reasons for mill closures are that sawmills simply wear down through time and become less competitive as technology improves. Retooling a mill can cost 30 to 60 million dollars, which becomes of questionable economic value in an environment of increasing regulations coupled with dwindling log supplies. Cost efficiencies in transportation of raw material vs. processed lumber can favor installation of regional super mills instead of smaller local mills. Increasing log exports overseas may place a strain on available log supplies to mills, and there is the loss of added value created with local processing. Economic downturns, such as the 2000-2001 lumber slump and 2008 housing bubble bust resulting in the great recession, did not allow marginally productive mills to continue. As you look at the 2000-2015 illustration of mill closures on the inside back cover of this publication and understand the circumstances it takes to maintain a viable milling facility in this State, we are fortunate to have the remaining milling facilities that have persevered.

Special thanks to the mill owners and staff who contributed updates to this publication, particularly those who support this project with advertising. A number of companies listed are Associate Members or financial contributors to FLC, and their annual support is greatly valued.

Any errors and omissions are of course unintentional. If you find any issue or needed changes with information presented in this Resource Guide, we would appreciate hearing about it. Please forward any such changes to Deidre Bryant, FLC Executive Director, at deidreb@forestlandowners.org or (877) 327-3778.

This Resource Guide will be updated and published bi-annually. If there is a company or resource you believe should be listed, please send the details to Deidre Bryant by email, deidreb@forestlandowners.org, or by regular USPS mail.
